

[Neon Forest Networks]

“An infrastructure of Indigenous data sovereignty”

Hyperscaler Models

A pyramid that must grow endlessly.

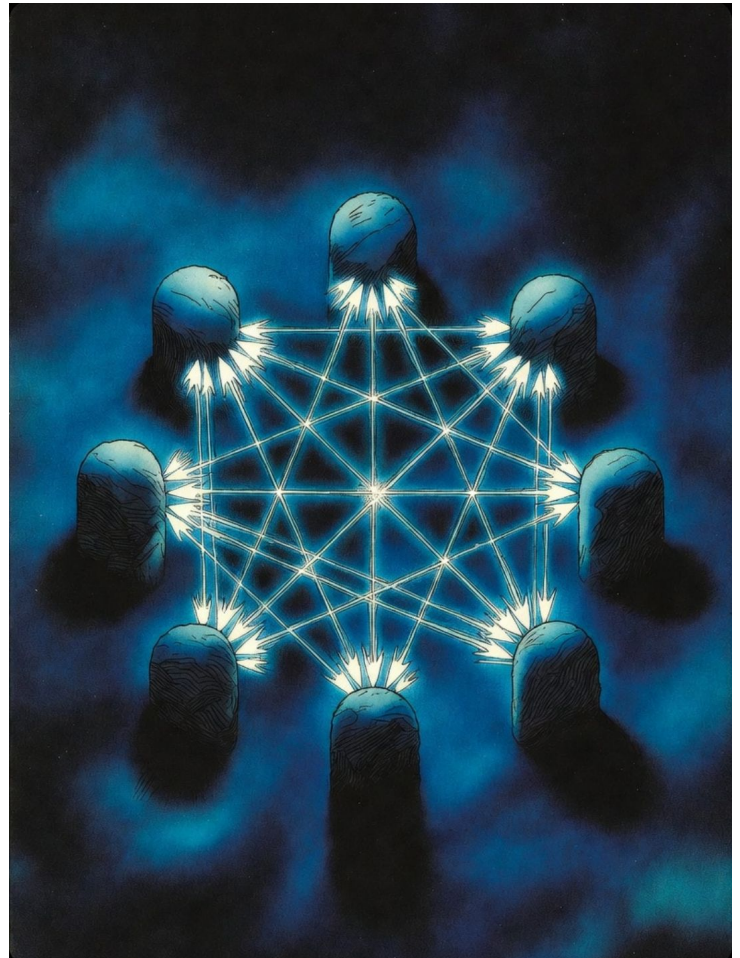

Absorbing capital like a vortex.

Extracting and baking data from everywhere.

Revenue is paramount.

Data sovereignty is fine print legalese.

Indigenous constellations

A circle of equal nodes.

Each community the steward of its data and everyone else's.

Revenue is a side-effect.

Data sovereignty is the architecture.

An infrastructure of Indigenous data sovereignty?

Where Indigenous sovereignty
is the logic
for data sovereignty.
